Infection Control

Playscapes products have been designed and manufactured for use in health care facilities for 30 years. All products are made with commercial grade materials including high pressure and thermally fused laminates, and durable plastics such as acrylic (commercially known as Plexiglas or Lucite), rigid PETG, or polycarbonate (commercially known as Lexan).

All products have smooth, non-permeable, and abrasion resistant or Teflon coated surfaces for easy cleaning. Frequent cleaning with most commercial disinfectant solutions will not damage or diminish any of our product finishes.

Playscapes products should be included in the same cleaning protocols as furniture and other high contact surfaces.
